

The #1 Blockchain Hit
has Come to TRON

Chibi Fighters, est. Feb 2018

Welcome to
CHIBI FIGHTERS

which has been one of the longest-running blockchain games on the Ethereum blockchain. We're now bringing the #1 hit to the TRON Network in 2019.

Chibi Fighters is an action-packed, multi-style fighting game, with a vast marketplace filled with gear, armor, potions and weapons to prepare your Chibi Fighter for battle!

Chibi Fighters features an online multiplayer module that allows you to team up with friends to form a clan and conquer Chibi Island together.

Fully Animated Action

all 6 billion + Chibi combinations are animated.

We use proprietary server-side technology, based on the popular PIXI framework, creating the ability to play Chibi Fighters on any device with no plugins needed.

Earn Real Crypto Currency

Players can earn in various ways. Individual and multi-player battle winners are rewarded in TRX. Other in-game contests and mini-games can also earn rewards. Players who own Chibi Fighters with special talents or skills can also earn rewards for allowing others to "fuse" with their Chibi Fighter.

Simple, yet deep and challenging

Chibi Fighters is a simple concept game but requires a deep and challenging gameplay strategy.

With various characters, gameplay options and equipment, Chibi Fighters will keep you engaged in the fight long after many games have become stale and boring.

COMPANY

Chibi Fighters came to life in early 2018 and was written and created by Garry Runke.

As a moderately sized studio, we have grown since then to now include two very talented 2D artists, two full-time resident programmers and a superb marketing force. Of course, we also wish to recognize an amazing community of players, mods and admins. If not for you, Chibi Fighters would not be possible.

From a business perspective, we have sourced minimal art-

work packages and nearly all artwork in-game is proprietary to Chibi Fighters.

We strive to work with talent all over the globe and therefore maintain a heavy online presence, rather than be restricted by a traditional brick and mortar studio.

CURRENT STATE

We feel the TRON Blockchain Network does offer various advantages over the Ethereum Network.

The most important advantage is free transactions for players.

While creating Chibi Fighters TRON Edition, we upgrade the token contracts to the latest versions and improve the code. We want to ensure we put lessons learned in the past to good use in the Chibi Fighters TRON Edition.

Our TRON Presale of Founders Chibis (FCF) tokens was over in record time. Currently, we have Early Bird Chibi Fighter tokens for sale and those tokens are limited. Base token Chibi Fighter tokens will be available upon game launch.

Owning an Early Bird Chibi Fighter (CBE) token grants access to a spectacular welcome package of

exclusive gear and weapon choices only available to FCF and CBE owners.

These choices will not be made available after game launch. For instance, CBE Chibi Fighters will come with an in-game pet Dragon who no doubt will help its master in the battle for supremacy on Chibi Island!

FUTURE STATE

WE ARE FOCUSED ON FUN AND CONTENT.

As a whole, one might call us the trashy underdog, but we are committed to bringing players a fun game to continuously entertain!

We value the voice of our players and most of Chibi Fighters is based on community feedback and involvement. We would never be where we are if it wasn't for all the awesome people in the Chibi community.

Short Term Goals

We will obtain a TRON server. As Chibi Fighters is a fighting game at heart, it only makes sense to give TRON and ETH game version players the ability to battle each other! Cross-blockchain battles between ETH and TRON Chibi Fighters will kick things up a notch and make for some spirited battles

CHIBI FIGHTERS

Token

Chibi Fighters are a TRC-20 token. Ownership, DNA and various other stats are stored on the blockchain.

Other data resides in our server system. That allows for free gameplay and avoids costs or other blockchain related fees we feel game players shouldn't have to worry about.

Players can fuse with other Chibis and earn TRX. If a player owns a Chibi Fighter with special characteristics, other players may pay for the opportunity to fuse with your Chibi! There is a cost, however.

The more times a Chibi is used for a fusion, the longer it will take for that Chibi to return to battle. This "downtime" phase is

called an "exhaust" period. The maximum number of exhaust time is currently capped at 14 days per Chibi Fighter.

Traits

They yield various benefits or penalties throughout the game. You can inherit them via fusions. For example, Boss Chibis have unique traits no other Chibi can have, however they can offer them for fusion and if you are lucky you can inherit a trait.

This allows for players to make some nice TRX since the minimum price of a fusion is currently 5\$ of which 80% goes to the player that offers them.

OFF-CHAIN CURRENCY

To battle gas prices and other expenses, players have no interest in, we wrote our **own off-chain solution**.

A sidechain is a fancy word that just puts overhead on a well-established system, so we skipped that altogether and went back to centralized database structures for mechanics that don't make sense to be on-chain.

Servers run on backups precise to the minute and are constantly tested by 2 hired hackers for security breaches.

You can buy TRXCrystals. This off-chain currency can be swapped back to TRX any time.

Minimum payout is 3 TRXCrystals.

CRYSTAL CAVE

Every month we take **20% of our profits** and put them in the Crystal Cave.

Players can complete daily tasks, some of which are free, but some will require a fee. E.g. buy a TRON chest or participation in a mini-game.

Players are rewarded with gems for completing those tasks. These gems can be put in the Crystal Cave and, depending on their contribution share, they receive TRX Shards once the Crystal Cave contents are distributed.

This occurs every 7 days.

CURRENCIES

There are various in-game currencies available in Chibi Fighters.

Coins for example drop all over the place, they are used for non-premium items like potions or prerequisites for adventures.

On the other hand, we have TRXCrystals. Our off-chain currency that you can swap for real TRON any-

time you like.

This hybrid allows for cross sales between our Ethereum and TRON server and takes battles to a whole new level.

It is also a joy for Ethereum players that save on gas and TRON player save on bandwidth.

Coins are fully off-chain and are used for non-premium items like potions and dungeon prerequisites. They drop all over the place and are fairly easy to come by.

Gems. While not a real currency, they are still very valuable since they are needed for the cave share. The more gems you add to the cave, the higher your TRX share in the crystal cave.

TRXCrystals, TRXShards
32 TRXShards = 1 TRXCrystal = 10 TRX

Combining shards or breaking down crystals doesn't cost anything. Shards are the smallest currency we have. Shards are used for battles over TRON or premium items.

Glass shards are obtained by restocking the Shady Merchant. It is unknown what this rare shard might do. Possible future use is buying weapon crates or other scarce items.

ADVENTURES

Chibi Fighters Adventures is more of an offline type activity. Players can send their warriors out on an adventure and it will return some time later with precious loot which is usually only obtained via the in-game marketplace. Your Chibi Fighter will also gain XP (experience points).

Another fun feature of this game type is the grouping system. Once you start an adventure you can add either your own Chibis or Chibis from other players to the group! This can cut travel time and will increase the loot rewards. This is possible because on your Chibis page you can set your Chibis for "player lending".

Setting a Chibi for lending is great when you are off for the day. Other players can pick it up while you are asleep and the next day you will have some loot boxes in your account!

THE HUNT

Currently, this is our core game feature. You can battle your way through orks and bosses. It includes buffs, cool effects and uses your Chibi traits.

Some of the loot earned in this game type are items with which you can equip your Chibi Fighter like gear or weapons. These items can be sold for TRXShards on our internal marketplace.

You are not interacting with other players during The Hunt game mode. When your Chibi Fighter encounters an enemy, you will be watching a pre-solved battle. There is even an “autoplay” button so you can have your little warrior slashing away while you are busy “working”.

Every 20 levels you will encounter a Boss Chibi starting at level 20. They are tougher foes but will drop better loot if you can find a way to defeat them!

No cheating possible

Drops are consumables and wearables.
You earn XP too. Great way to level up your Chibi.

**CHIBI
FIGHTERS**

PVP

(One on One Battle Mode)

This gameplay will be similar to The Hunt mode, but is a mano-a-mano, 1 vs 1 Chibi battle!

You earn PVP points by defeating a Chibi. And lose points by being defeated. You are matched against Chibis at similar XP levels or more. You can find yourself up against way stronger Chibis.

It's the nature of PVP...only the strongest Chibi survives. Level up in The Hunt and other game modes to make sure you get some levels in before you face your opponents. A weak Chibi simply doesn't stand a chance. It's the nature of PVP, there are no friends in PVP!

There are no points for defeating lower ranks

You won't be matched against them either. If you are #1 there is no other Chibi to defeat. This system allows for the strongest, best equipped Chibi to be #1.

MARKETS

Chibi Fighters has various in-game markets.

There is a consumables market to get your necessities. For example health potions or hunter potions or items required to enter a certain adventure.

Then there is a Loot Market where you can trade looted gear and equipment which may boost your Chibis stats for TRON.

Lastly, there is the Armory where you select and purchase your weapons to carry into bat-

tle. The Armory tokens are a little bit different since weapons are fully on-chain. In the Armory, you trade on the blockchain.

This also means that you are not restricted to Chibi Fighters marketplaces. You can trade your armory items on other compatible token exchanges.

CONSUMABLES MARKET

You will find various consumables during The Hunt or adventures.

Sometimes, however, you don't want to wait for a drop and quickly buy the component on the market.

That's what the Shady Merchant is for. You can buy all sorts of consumables at his store.

As a twist, The Shady Merchant is restocked by the players themselves.

If no player sells health potions the Merchant, for example, the Merchants store will have no supply of health potions and no other player can buy one.

Of course, we can refill the merchant, too in case some Chibis are hoarders.

A shady merchant approaches you and takes you by the hand. He shows you a hidden compartment underneath his counter. Your eyes widen. It is filled with rare consumables. You can't wait to spend your hard earned gold here.

The shady merchant sells consumables you can also receive by going out on adventures. It is for players that just don't get that one drop, are short of that one item or just can't be bothered grinding away.

Restock the merchant via  and receive  in return.

--	---	---	---	---	---	---	---	--	--	--	--

LOOT MARKET

The Loot Market allows for players to sell their loot for TRX-Shards, which ultimately can be converted to TRON.

With so many different stats you can build a Chibi the way you see fit.

Besides common stats like critical chance, armor or damage, you also have "buff based" stats like bleed, poison and stun.

It's not always about damage though! With the right build, you can stun your opponent constantly and let him bleed out while you inflict hardly any damage.

Of course, these builds are a bit more complex than the usual Chibi Fighter you will encounter.

Finaldoom					

ARMORY MARKET

Since armory items are on-chain, they do have their own marketplace. Creating a perfect build requires a matching weapon.

Here, you trade directly for TRON

You can sell so-called infused weapons. They are infused with a legendary fragment.

When buying an infused item, you will also receive the legendary fragment. That is a great way to obtain legendary fragments the easy way.

You can remove it from the weapon anytime and reuse it yourself. For example to forge a legendary item from a common one, or of course juice up your blade and make it even more powerful.
